

## TACKLING AGRICULTURAL PHOSPHORUS LOAD BY SOIL AMENDMENTS

### ABOUT THE PROJECT

The project GYPREG brings together national and public authorities, NGOs, farmers and farmers' associations to increase the uptake of gypsum treatment of agricultural fields that allows to reduce phosphorus losses from agriculture.

Institute of Technology and Life Sciences, National Research Institute (ITP-PIB) - Cracow Branch has become a Partner of the project.

This project aims to protect the ecological health of the Baltic Sea, by implementing agrotechnical practices targeted to reduce the intensity of soil erosion and nutrient loss (mainly phosphorus) processes.

The GYPREG project received funding under the Interreg Baltic Sea Region Programme and will be guided during 2023-2027. Our partners include scientific bodies located in Finland, Latvia, Lithuania, and Sweden, engaged in agronomy and environmental protection issues.

Among associated organizations from Poland, which supported our efforts in obtaining financing for research planned in the GYPREG project are: Sub-Carpathian Agricultural Advisory Center in Boguchwala, Agricultural Advisory Center in Brwinow, Malopolskie Agricultural Advisory Centre in Karniowice, Agricultural Advisory Center in Opole.
