DIRECTIONS AND PERSPECTIVES OF AGRI-ENVIRONMENTAL PROGRAMMES EVOLUTION IN POLAND AFTER THE YEAR 2013

Key words: agri-environmental programme, directions of agriculture development, economic and ecological benefits

Summary

The aim of this article was to analyse agri-environmental programme which has been realized in Poland since 2004 and to show the direction of changes and evolution of this programme after the year 2013. Studied data were taken from the Agency for Agriculture Restructuring and Modernisation. Attention was paid to the need of regional treatment of some packages (extensive permanent grasslands), to the necessity of combining plant and animal production within a farm (sustainable agriculture, ecological agriculture) and of closer connection between the subsiding of ecological production with its amount. The support of precision farming was proposed.
